

API Documentation

[Introduction](#) [JSON Format](#) [XML Format](#)

Introduction

Tagembed lets you create beautiful social hubs for your websites with a click of a button.

Getting started :

Post Limit	100 Posts/request
API Access	Currently, we are providing API access with API Starter and Advance plans.
Update Time	Update time based on your pricing plan
Request Limit	1 Request/ Per Minute
User Key	You can find user key in your Tagembed My Account Section <i>*API Options will be only shown when your account is having Tagembed API access</i>
Format	JSON and XML
Example URL	https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0

Authentication :

- Each API request requires an API key either as a HTTP Header or included as a query string. You can find your API key in the Tagembed Account Section.
- Your API key has many privileges, be sure to keep it secret! Do not share the key in publicly accessible areas such as GitHub, client-side code, and so forth.
- Query string
- Include the API key as part of the request path in the format **?api_key=API_KEY**.

Response Codes :

The common HTTP Response Status Codes are used.

1. Successful Response :

- 400 Bad Request

2. Error Responses :

- 400 Bad Request
- 403 Forbidden
- 404 Not Found
- 405 User Key Required
- 406 API Is Not Available In Your Plan Or Wrong Key
- 407 API Limit Exceeded
- 408 Wall Is Not Active
- 409 Wall Is Not Available For This User Key
- 500 Internal Server Error

Endpoint :

<https://app.tagembed.com/api/apiJson>

Posts:

Posts that can be integrated on your website.

1. Wall Id - Get Posts

Request : GET /5613(wallId)?User_Key			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id

2. Number Of Posts - User will get total post as API response

Request : GET /5613(wallId)?User_Key&count=3(NumberOfPostOptional)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3			
Output Maximum number of posts will be 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Count	Yes	Number	Number Of Post

3. Post Offset - User will get posts starting from post index

Request : GET /5613(wallId)?User_Key&start=0()&count=3(NumberOfPostOptional)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3			
Output Posts with starting position 0, Max number of posts 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Start	No	Number	Start
Count	Yes	Number	Number Of Post

4. Min Id - Response will start from post min id

Request : GET /5613(wallId)?User_Key&count=3(NumberOfPostOptional)&minId=810(PostId)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3&minId=810			
Output Posts after minId (810) , Max Number of Post 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Count	Yes	Number	Number Of Post
minid	Yes	Number	Min Post Id

5. Max Id - Response will start from first id to max id

Request : GET /5613(wallId)?User_Key&count=3(NumberOfPostOptional)&maxId=850(PostId)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3&maxId=850			
Output Posts before maxId (850), Max Number of Post 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Count	Yes	Number	Number Of Post
maxid	Yes	Number	Max Post Id

6. Posts Between Post Id's - Response will start from given min id to max id

Request : GET /5613(WallId)?User_Key&count=3(NumberOfPostOptional)&minId=810(StartPostId)&maxId=850(EndPostID)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3&minId=810&maxId=850			
Output Posts between StartPostId(810) and EndPostId (850), Max Number of Post 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Count	Yes	Number	Number Of Post
minid	Yes	Number	Min Post Id
maxid	Yes	Number	Max Post Id

7. Filter Posts - Response will start from given min id to max id

Request : GET /5613(wallId)?User_Key&count=3(NumberOfPostOptional)&network=twitter(NetworkName)			
Example https://app.tagembed.com/api/apiJson/5613?user_key=56200ef68981fb037175a9ecca66c4d0&count=3&network=twitter			
Output Post filter according network, Max Number of Post 3			
Field Name	Optional	Type	Remark
Wallid	No	Number	Wall id
Count	Yes	Number	Number Of Post
network	Yes	String	Network Name
Filter Parameters			
1	&network=twitter	11	&network=workplac
2	&network=instagram	12	&network=yelp
3	&network=facebook	13	&network=slack
4	&network=google	14	&network=yammer
5	&network=pinterest	15	&network=airbnb
6	&network=flickr	16	&network=soundcloud
7	&network=youtube	17	&network=giphy
8	&network=vimeo	18	&network=capterra
9	&network=linkedin	19	&network=etsy
10	&network=tumblr	20	&network=rss

Response - application/xml, text/xml
